# Why Microsoft Azure?

## Open and flexible cloud service platform

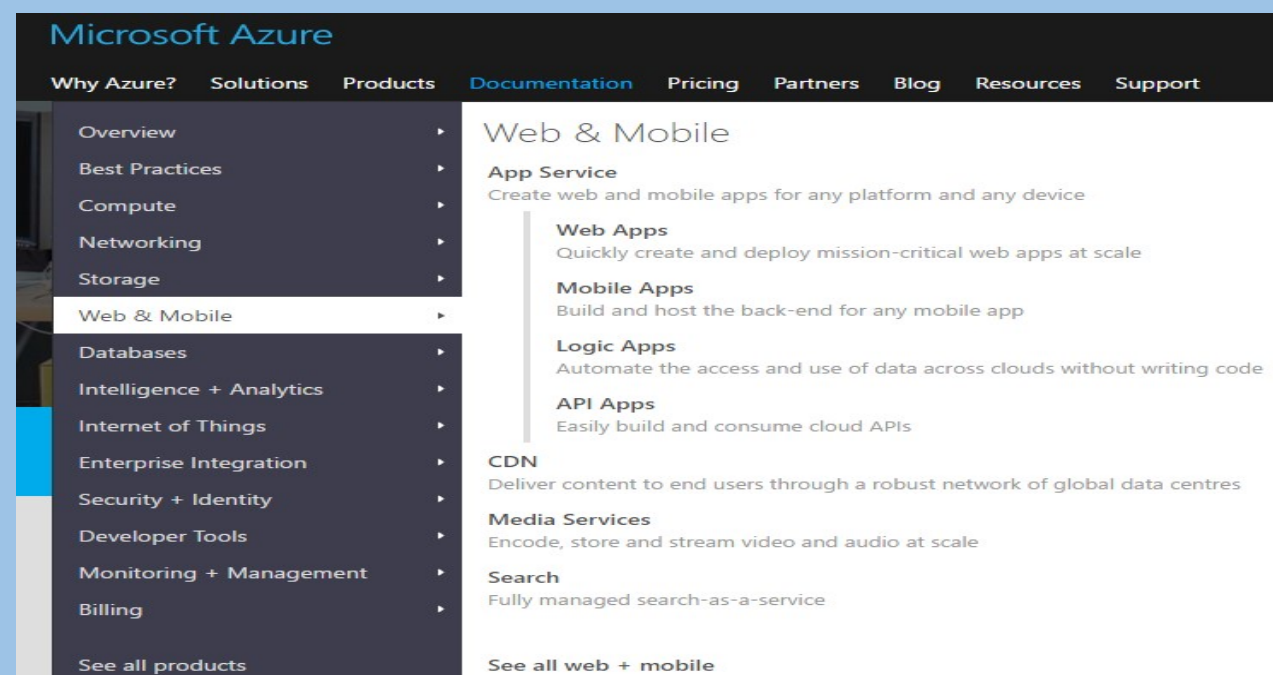

Azure supports the broadest selection of operating systems, programming languages, frameworks, tools, databases and devices. Run Linux containers with Docker integration; build apps with JavaScript, Python, .NET, PHP, Java and Node.js; build back-ends for iOS, Android and Windows devices. Azure cloud service supports the same technologies millions of developers and IT professionals already rely on and trust.

Build and deploy modern, cross platform web and mobile applications

Azure Customer examples and real world projects

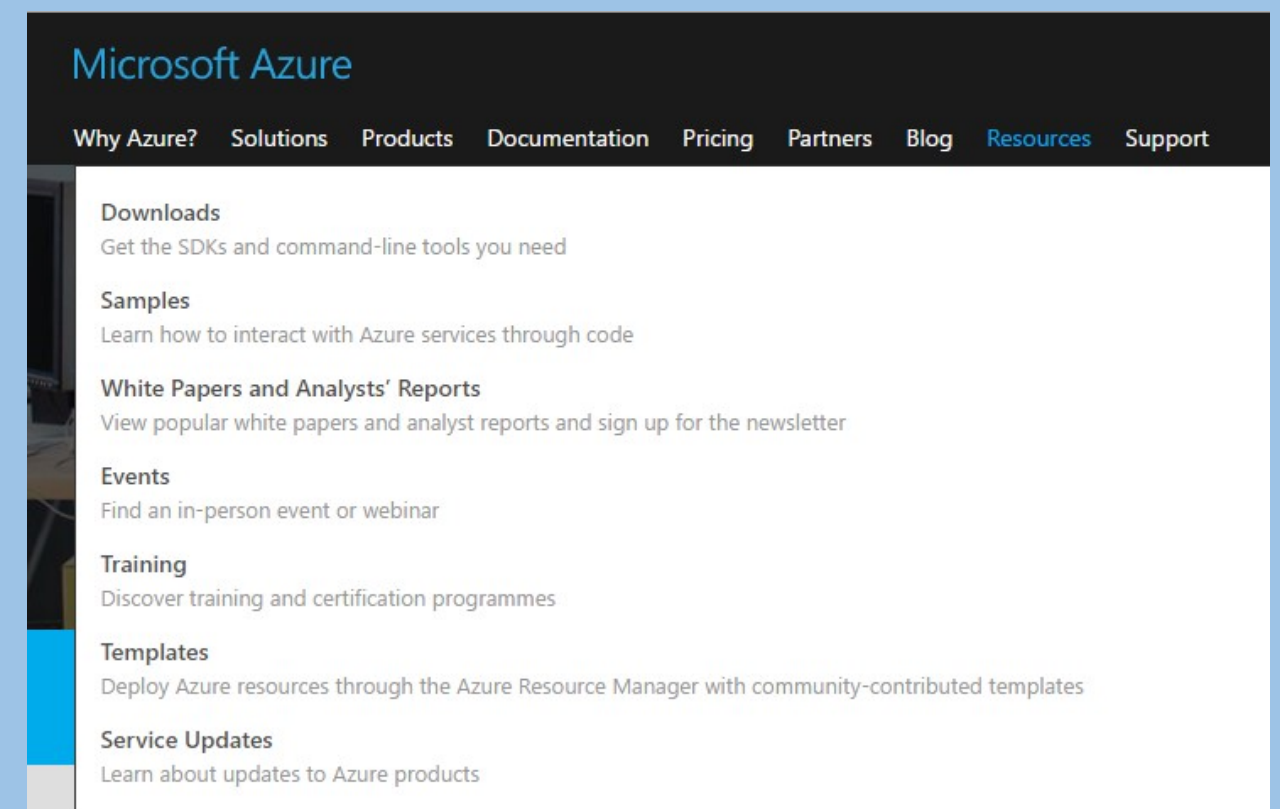

## Plenty of documentation to help
